

# Tabletop Hockey Rink

### What you will need:

- 1 baking sheet or plastic pan or aluminum foil container \*
- Water
- Hockey rink templates on the next page
- tape
- Scissors

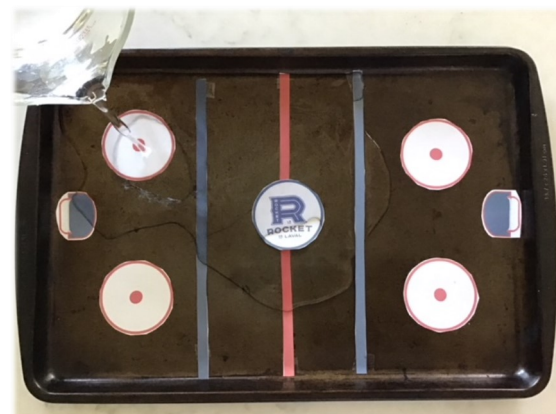

\* Use a container with sides that are at least 5cm high if you are going to put your "rink" in the freezer. That way the water will not spill. If it's winter, you can use a baking tray and freeze it outside.

### Directions:

1. Cut out all the hockey rink template pieces on the next page and tape them in your pan as shown.
2. Place your pan in the freezer making sure it is level. Then carefully pour water into your pan until the paper is covered. (If it's cold enough outside, you can freeze your pan outside!) Freeze overnight.
3. Use interlocking blocks to create goal posts, a bottle cap as a puck, and two plastic spoons for hockey sticks.

Once your tabletop hockey rink is frozen, you are ready to challenge your friends to a game!
